In the face of the COVID-19 pandemic, we know your clients are concerned about keeping their members safe while also worrying about their healthcare spend. For your clients with Beyond Insights—our advanced, interactive reporting and analytics tool—now we can help them understand their populations' COVID-19 risk by using demographic and claims data.

Identifying Risk

Our new COVID-19 Beyond Insights dashboard is being released in three phases. The first phase, **Identify Risk**, is being released tomorrow, **April 28th**.

This first phase demonstrates the potential risk based on members' demographics and medical history. Some of the data displayed:

- All-in expense for acute respiratory care and pulmonary conditions for pre-COVID-19 inpatient confinements
- Number of members at-risk for contracting COVID-19 based on their diagnosis
- Membership distribution by gender and age

- Top COVID-19 risk diagnoses based on claim experience
- Members with predicted higher costs because of a higher prospective risk score
- High-care score for members who frequent the ER, putting them at greater risk for contracting COVID-19
- Members for whom hospitalization is likely in the next year, based on historical diagnostic and procedure claims
- Top state hot-spots with membership population totals and prospective risk scores

As of April 28, for participating clients, log into myTrustmarkBenefits.com to access Beyond Insights and your new COVID-19 dashboard.

If you have clients who may be interested in adding Beyond Insights, please let me know.
